

# Artificial Intelligence & Machine Learning

	MON	TUE	WED	THU	FRI	ENVIRONMENT
Week 1 Python	<ul style="list-style-type: none"> <li>Installing Anaconda, Python</li> <li>Python Spyder IDE</li> <li>Python basics</li> <li>Python data structures</li> <li>Numpy arrays</li> <li>Indexing</li> <li>File input/output</li> </ul>	<ul style="list-style-type: none"> <li>Data frame manipulation</li> <li>Descriptive statistics</li> <li>Combining and merging data frames</li> <li>Removing duplicates</li> <li>Discretizing and binning</li> <li>String manipulation</li> <li>Selection and filtering</li> <li>Natural language processing basics with Python</li> <li>NLTK, textblob, Tokenizers</li> <li>TF-IDF, edit distance</li> <li>Text preprocessing - stopwords, latent semantic analysis and indexing</li> <li>Named entity recognizer, Part of speech tagging</li> <li>ngrams clustering</li> <li>Word association analysis</li> <li>Text clustering and categorization, sentiment analysis</li> </ul>	<ul style="list-style-type: none"> <li>Visualization - plots, charts (line, bar, pie, histograms, scatterplot, parallel coordinates)</li> <li>Predictive modelling tools &amp; analytics with Python</li> <li>Case study - kth nearest neighbor algorithm for classification</li> <li>Lazy learning notation</li> <li>Computation of distance matrix</li> <li>The Optimum K value</li> <li>Data transformations as a preprocessing phase</li> <li>Model building on training data set</li> <li>Model validation on testing data set</li> <li>Evaluation of model</li> <li>Advantages / disadvantages of KNN models</li> </ul>	<ul style="list-style-type: none"> <li>Naive Bayes algorithm</li> <li>Bayesian Theorem</li> <li>Probabilities - Prior/Posterior</li> <li>Conditional and Joint Probabilities Notion</li> <li>Traditional approach - extract important features</li> <li>Naive approach - independence of features assumption</li> <li>Data processing - discretization of features</li> <li>Model building, testing, validation</li> <li>Advantages/disadvantages of Naive Bayes model</li> </ul>	<ul style="list-style-type: none"> <li>Case study - Support Vector Machines</li> <li>Understanding SVMs</li> <li>Concepts of linearly separable vs non-separable data</li> <li>Build, train the model</li> <li>Testing and validation</li> <li>Tuning the model</li> <li>Application - credit risk analytics using SVM in Python</li> </ul>	

	MON	TUE	WED	THU	FRI	ENVIRONMENT
<b>Week 2</b> <b>Linux</b>	<p>Written evaluation</p> <p>Trainer 1-1 interview</p> <ul style="list-style-type: none"> <li>• Intro to networking</li> </ul> <p>Quality Audit</p> <ul style="list-style-type: none"> <li>• OSI Model</li> <li>• Transmission basics and networking media</li> <li>• TCP/IP Protocols</li> <li>• Topologies and Ethernet standards</li> <li>• Network hardware</li> <li>• Wireless networking</li> <li>• Network Operating Systems</li> <li>• VoIP</li> <li>• Network security &amp; management</li> </ul>	<ul style="list-style-type: none"> <li>• Enterprise architecture</li> <li>• Business architecture</li> <li>• Data architecture</li> <li>• Application component</li> <li>• Master data management</li> <li>• Clustered or load-balanced environments</li> <li>• Intro to Architecture-driven modernization</li> <li>• Transaction processing architecture</li> <li>• Service Oriented Architecture</li> <li>• Data quality and MDM</li> </ul>	<ul style="list-style-type: none"> <li>• Intro to Linux &amp; OS Installation</li> <li>• Linux boot process</li> <li>• File system hierarchy</li> <li>• Linux distros</li> <li>• Basic linux commands - cd, pwd, touch, cp, grep, find, df, du</li> </ul>	<ul style="list-style-type: none"> <li>• Intro to the cloud</li> <li>• Intro to GCP</li> <li>• VMs in GCP</li> <li>• Storage in the cloud</li> <li>• Apps in the cloud</li> <li>• Developing, deploying, monitoring in the cloud</li> <li>• Big data &amp; ML in the cloud</li> </ul>	<ul style="list-style-type: none"> <li>• Bash scripting &amp; CLI tools</li> <li>• Intro to distributed architecture</li> </ul>	
<b>Week 3</b> <b>DevOps</b>	<p>Written evaluation</p> <p>Trainer 1-1 interview</p> <p>Quality Audit</p> <ul style="list-style-type: none"> <li>• Intro to Docker</li> <li>• Containerization fundamentals</li> <li>• Creating images</li> <li>• Working with volumes</li> <li>• Docker networking basics</li> <li>• Docker swarm</li> <li>• Intro to Kubernetes</li> </ul>	<ul style="list-style-type: none"> <li>• Intro to DevOps</li> <li>• SDLC models</li> <li>• DevOps + Agile</li> <li>• DevOps tools - building a pipeline</li> <li>• Configuration management</li> <li>• CI/CD</li> </ul>	<ul style="list-style-type: none"> <li>• Intro to git and version control</li> <li>• Creating repos, cloning, check-in, committing</li> <li>• Fetch, pull, and remote</li> <li>• Branching</li> </ul>	<ul style="list-style-type: none"> <li>• Spinnaker</li> <li>• Application management and deployment</li> <li>• Pipeline architecture</li> <li>• Deploying Spinnaker using Helm</li> <li>• Configure Spinnaker</li> <li>• Deploy Spinnaker chart</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>• Creating containerized apps with Docker</li> <li>• Intro to Jenkins</li> <li>• Jenkins architecture</li> <li>• Installing, configuring Jenkins</li> <li>• Creating DevOps pipeline with Jenkins</li> </ul>	

	MON	TUE	WED	THU	FRI	ENVIRONMENT
<p><b>Week 4</b> <b>AI / ML</b></p>	<p>Project 1</p> <p>Written evaluation</p> <p>Trainer 1-1 interview</p> <p>Quality Audit</p> <ul style="list-style-type: none"> <li>Intro to AI - techniques, methods, frameworks, use cases</li> <li>Intro to Machine Learning - algorithms and use cases</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Python libraries - pandas, numpy, matplotlib, scikit-learn</li> <li>ML algorithms - Regression, classification, clustering, association</li> <li>Creating a model</li> <li>Training and test data</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Supervised/unsupervised learning</li> <li>Applications of regression</li> <li>Types of regression, fitting the line</li> <li>Applications of classification</li> <li>Unsupervised learning - clustering</li> <li>Distance between clusters</li> <li>k-means algorithm</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Intro to Deep Learning</li> <li>Neural networks - types</li> <li>Biological vs artificial neuron</li> <li>Artificial neural network, layers</li> <li>Reinforcement learning - principles, elements</li> <li>RL Agent Taxonomy</li> <li>Hidden Markov Models</li> <li>Finding hidden states - Viterbi algorithm</li> <li>Learning and the Baum-Welch algorithm</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Natural Language Processing - techniques, components, applications</li> <li>Tensorflow w/ Keras</li> <li>Deployment of machine learning models</li> <li>Saving the model - serialization/deserialization</li> <li>Creating an API using Flask</li> </ul>	
<p><b>Week 5</b> <b>Tensorflow</b></p>	<p>Project 1</p> <p>Written evaluation</p> <p>Quality audit</p> <p>Trainer 1-1 interview</p> <ul style="list-style-type: none"> <li>History of tensorflow</li> <li>Implementing basic graphs</li> <li>Reducing tensors of arbitrary shape</li> <li>Graphs, sessions, TensorBoard</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Activation functions</li> <li>Perceptrons - illustration, training, parameters</li> <li>Tensorflow basics</li> <li>Graph visualization</li> <li>Constants, placeholders, variables</li> <li>Creating a model</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Limitations of single perceptrons</li> <li>Multi-layer perceptrons</li> <li>Backpropagation algorithm</li> <li>Understand backprop - neural network</li> <li>MLP digit classifier using tensorflow</li> <li>TensorBoard</li> </ul>	<p>Project 1</p> <ul style="list-style-type: none"> <li>Restricted Boltzmann machine</li> <li>Collaborative filtering with RBM</li> <li>Autoencoders</li> </ul>	<p>Project 2</p> <ul style="list-style-type: none"> <li>TFLearn API</li> <li>Composing models in TFLearn</li> <li>Sequential composition</li> <li>Functional composition</li> <li>Predefined neural network layers</li> <li>Batch normalization</li> <li>Saving and loading a model with TFLearn</li> <li>Customizing the training process</li> <li>TensorBoard with TFLearn</li> </ul>	

	MON	TUE	WED	THU	FRI	ENVIRONMENT
<b>Week 6</b> <b>ML DevOps</b>	Project 2 <ul style="list-style-type: none"> <li>Intro to Kubeflow on Google Kubernetes Engine</li> <li>Setting up GCP and SDK</li> <li>Setup environment, download project files, deploy kubeflow</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>Training workflow</li> <li>Deployment workflow and strategies</li> <li>Batch, streaming, and realtime predictions</li> <li>Ad-hoc predictions via SQL</li> <li>Airflow scheduler</li> <li>Docker containers</li> <li>Amazon SageMaker</li> <li>MLFlow</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>Airflow</li> <li>DAG</li> <li>Airflow scheduler</li> <li>DagRun</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>SeldonCore workflow</li> <li>Installing SeldonCore</li> <li>Wrap your model</li> <li>Define runtime service graph</li> <li>Deploy and serve predictions</li> <li>Prepacked model servers</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>ML Ops Pipeline with Google Cloud Composer</li> <li>Cloud Composer</li> <li>Creating Cloud Composer Environment</li> <li>Create an ML Model</li> <li>Creating a DAG</li> </ul>	
<b>Week 7</b> <b>Distributed Tensorflow</b>	Project 2 <p>Written evaluation Trainer 1-1 interview Quality Audit</p> <ul style="list-style-type: none"> <li>Types of parallelism in distributed deep learning</li> <li>Model and data parallelism</li> <li>Distributed tensorflow with tf.distribute.Strategy</li> <li>Supported types of distribution strategies</li> <li>MirroredStrategy</li> <li>MultiWorkerMirroredStrategy</li> <li>ParameterServerStrategy</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>Working with tensorflow and GPUs</li> <li>Multiple GPUs and one CPU</li> <li>Multiple servers</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>Introduction to distributed deep learning</li> <li>Parallel computer platforms</li> <li>Performance metrics</li> <li>Concurrency in data parallelism training</li> <li>Synchronous vs asynchronous distributed training</li> <li>Parameter distribution and communication in synchronous training</li> <li>Horovod - overview, running distributed Tensorflow</li> <li>Usage in Estimators</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>The Yarn workflow</li> <li>CLI commands</li> <li>Migrating from npm client</li> <li>Creating a package</li> <li>Dependencies &amp; Versions</li> <li>Configuration</li> <li>Workspaces</li> <li>Plug'n'play</li> <li>Yarn Organization</li> </ul>	Project 2 <ul style="list-style-type: none"> <li>TensorFlowOnYarn (TonY)</li> <li>tf-yarn APIs</li> <li>run_on_yarn</li> <li>standalone_client_mode</li> <li>Error reporting</li> <li>Port reservation race condition</li> <li>Accessing HDFS in Tensorflow</li> <li>Mixed CPU/GPU training</li> </ul>	
<b>Week 8</b> <b>Project 3</b>	Project 3	Project 3	Project 3	Project 3	Project 3	
<b>Week 9</b> <b>Panels / Project 3</b>	Project 3	Project 3	Project 3	Project 3	Project 3	
<b>Week 10</b> <b>Project Showcase</b>	Project 3	Project 3	Project 3	Project 3		

PROJECT	TECHNOLOGIES
Project 1	Python, DevOps, ML
Project 2	Python, Tensorflow, ML, DevOps, GCP, Docker, Kubernetes
Project 3	Python, TonY, ML, DevOps
